Vikas Prajapati

Implementation & Integration Engineer | PHP, Python, Node.js | AI-Driven Development

Mumbai, Maharashtra, India | +91 8600290199 | vikasprajapati.dev@gmail.com | linkedin.com/in/vkasprajapati

SUMMARY

Full Stack Developer with 4+ years in e-commerce who builds SaaS-style platforms and the integrations around them. Hands-on with PHP (Laravel, CodeIgniter), Python, Node.js, MySQL, REST APIs, webhooks and Git. Integrated marketplaces, ERP, shipping and fraud-check APIs into Shopify stores, and built automation that cut manual effort by 60% and operational errors by 50%. Gathers requirements directly from business stakeholders and clients, configures and delivers the solution, and supports it after launch. Built and shipped three production platforms: a field-force HRMS for a client (Node.js, React, React Native for Android and iOS), an AI SEO platform and a multi-store analytics platform. AI-first by habit: uses Claude Code, Cursor, GitHub Copilot and LLM APIs on nearly every task, writes structured prompts and agent workflows, and keeps finding practical ways to make AI useful for the team, from building software to automating operations. Reviews and tests all AI-generated work before it ships.

TECHNICAL SKILLS

Languages: PHP (Laravel, CodeIgniter), Python, JavaScript (ES6+), TypeScript, SQL, HTML5, CSS3, Liquid

Databases: MySQL, PostgreSQL, Database Migrations, Query Optimization

APIs & Integration: REST APIs, GraphQL, Webhooks, OAuth 2.0, JWT, Third-Party API Integration, ERP Integration, Postman, Workflow Automation, Data Mapping

E-commerce: Shopify (Admin API, Apps, Themes, Metafields, Shopify CLI), Marketplace Integration (AliExpress, eBay, Walmart, AbeBooks, Catch), Inventory & Order Automation, Fulfilment & Shipping Integration

Frontend & Backend: Node.js, Express.js, React.js, Next.js, React Native, Tailwind CSS, Vite

Cloud & Tools: Git, GitHub, GitLab CI/CD, AWS (S3, Lambda, EC2, RDS), Linux, PM2, Google Cloud APIs

AI & Automation: Claude, ChatGPT / OpenAI API, Gemini, Claude Code, Cursor, GitHub Copilot, LLM Tool-Use Agents, Prompt Engineering

SEO & Performance: Technical SEO, Structured Data (JSON-LD), Core Web Vitals, Lighthouse, Page Speed Optimization

Delivery: Requirements Gathering, Client & Stakeholder Communication, Testing & UAT, Code Review, Team Leadership

SAAS & PLATFORM PROJECTS

Zob Connect – Field-Force HRMS Platform Node.js, Express, PostgreSQL, React, React Native

Freelance Project *2 months*

- Led a team of four to design, build and ship a production HRMS: REST API, React admin web app and React Native (Expo) apps for Android and iOS, built and published in two months. Live at web.zobconnect.com.
- Built client onboarding into the product: bulk employee and target import, KYC verification APIs (PAN, Aadhaar, bank) with a gate that blocks app access until verified, and role-based access for HR, zone, site and team managers.
- Integrated third-party APIs and OAuth 2.0: Google Drive for an audited document system with access logs and masked ID numbers, plus geofenced selfie attendance and live location tracking.
- Localised the platform in 10 Indian languages; deployed on Linux with PM2 and push-to-deploy CI/CD; published the Android and iOS apps with Expo EAS and over-the-air updates.
- Built entirely with Claude Code as the AI pair-programmer for implementation, code review, tests, debugging and translation, so four people shipped the web, Android and iOS apps in two months.

Search Optimizer – AI SEO Platform Node.js, TypeScript, MySQL, React, Claude / Gemini APIs

Ergode internal product – lead developer, designed and built end to end *Oct 2026 – Present*

- Built a platform that audits 10 Shopify stores with 8 tools (SEOmator, Lighthouse / PageSpeed, Google Search Console, Rich Results, AI Citability, GEO readiness, Brand Presence, site crawl) and combines them into weighted SEO, AEO and GEO scores; used in production by the SEO team and management (ai.ergodeapps.com/seo-optimizer).
- Built an AI fix agent (Claude and Gemini tool use) that edits a copy of the store's theme via Shopify CLI and its content via the Shopify Admin API, then re-checks each fix on a live preview with the same audit tools; nothing goes live until a person reviews the diff, with an automatic theme backup and one-click rollback.
- Added cross-store fixes: a fix verified on one store is reused on the other stores running the same theme, so each further store costs less and gets the same change.
- Controlled AI cost with per-fix spend limits, a cost estimate before every run and prompt caching (95% of input tokens served from cache); in the last 30 days, 25 published fixes resolved 88 issues confirmed by follow-up audits, at $0.40 per issue ($35.42 in total).
- Built the TypeScript REST API, MySQL schema (Drizzle ORM), background audit and fix workers and company single sign-on with Claude Code as AI pair-programmer: I set the architecture and prompts, and reviewed and tested every change.

Commerce Optimizer – Multi-Store Analytics Platform (20+ Stores) Node.js, TypeScript, MySQL, React, Claude / Gemini APIs
Ergode internal product – lead developer, designed and built end to end *Oct 2026 – Present*

- Unified seven data sources per store (Shopify, Google Ads, Meta Ads, Microsoft Ads, GA4, Microsoft Clarity, Search Console) through API integrations and scheduled sync workers into one portfolio dashboard of 25 core KPIs; sales reconcile with Shopify reports to the cent (ai.ergodeapps.com/commerce).
- Built rule-based ads health checks (broken conversion tracking, wasted search terms, budget-limited campaigns, Meta ad fatigue, spend without sales) and a Weekly Business Review that exports as a PDF deck and Excel workbook.
- Built human-in-the-loop AI actions (Claude with Gemini fallback): the AI proposes changes such as pausing campaigns, budget moves capped at ±20%, negative keywords and Shopify discount codes, and a person approves each one, with audit log, undo and a metered monthly AI budget.
- Encrypted API tokens with AES-256-GCM, validated inputs with Zod, wrote 141 unit tests, and split vendor libraries into cached chunks, cutting the app's own JavaScript bundle from 814 kB to 123 kB.
- Built with Claude Code as AI pair-programmer (Claude writing the code; I designed, reviewed, configured and deployed it), shipping 116 commits in four weeks through task branches, UAT and production on GitLab CI.

EXPERIENCE

Full Stack Developer (Technical Lead, D2C E-commerce) Mumbai, Maharashtra
Ergode IT Services Private Limited *Jul 2022 – Present*

Integrations & Automation

- Integrated the AliExpress marketplace with Shopify end to end: product import and sync, order placement, fulfilment and tracking updates back to the store.
- Integrated marketplace APIs (eBay, Walmart, AbeBooks, Catch) into centralized databases and built middleware between Shopify and internal ERP systems for real-time inventory and order sync.
- Built an automation platform on the Shopify Admin API for orders, inventory sync, fulfilment tracking, refunds, discounts and bulk price and quantity updates across 200K–500K SKUs per store.
- Built and maintained PHP applications in Laravel and CodeIgniter, and wrote PHP automation scripts that cut manual effort by 60% and operational errors by 50%.
- Built a custom Shopify app for bulk export and import of product details and metafields, replacing product-by-product edits with spreadsheet updates.

Delivery & Stakeholder Ownership

- Sole technical owner of the D2C e-commerce vertical in a 50-person IT organization, from requirements gathering to deployment; reduced time-to-market by 40%.
- D2C tech stack: Shopify (Online Store 2.0, Liquid, Admin API and GraphQL, Shopify CLI, metafields), JavaScript, React, Next.js and Tailwind CSS for storefront prototypes, PHP and Node.js for integrations, MySQL, and AWS.
- Migrated the stores from OpenCart to Shopify and built and launched 20+ Shopify stores, including custom Online Store 2.0 themes in Liquid.
- Grew daily sales 10–20x (about $15–20M annually) through the migration, integrations and automation.

AI-Driven Development & SEO

- Use AI tools daily for development, debugging, documentation and analysis, and introduced AI-assisted practices to the engineering team to speed up delivery.
- Integrated the ChatGPT API into an automated FAQ generation system, reducing customer support tickets by 30–40%; built LLM tools for product listing and SEO content.
- Ran technical SEO audits and fixes (82 to 88/100 on-page score) and improved Core Web Vitals through image, LCP and asset optimization.
- Won 3rd place in the company-wide AI Hackathon (Sep 2025) with an advertising and analytics tool built in 8 hours.

EDUCATION

A.P. Shah Institute of Technology, University of Mumbai Thane, Maharashtra
Bachelor of Engineering (B.E.) in Computer Science – CGPA 8.9/10 *2018 – 2022*

CERTIFICATIONS & AWARDS

AWS Fundamentals: Going Cloud-Native – Coursera – coursera.org/verify/QRAHXSHT3H8X

Python Programming Certification – View certificate

3rd Place, Ergode AI Hackathon 2025 – Rs. 10,000 prize; **Top 10 Finalist, IEEE APSIT Apscript Hackathon**
